# Rare: Portraits Of America's Endangered Species

## Synopsis

When a few of these photographs first appeared in the National Geographic magazine January 2009 issue, they were hailed as an arresting reminder of the hundreds of species teetering on the brink of final extinction—more than 1,200 animals and plants in all. Now, in *Rare*, Joel Sartore and National Geographic present 80 iconic images, representing a lifelong commitment to the natural world and a three-year investigation into the Endangered Species Act and the creatures it exists to protect. This book will give readers not only a broader understanding of the history and purpose of the Endangered Species Act, but also an intimate look at the very species it seeks to preserve. With stunning up-close portraits on every page, this important volume evokes sympathetic wonder at the vast and amazing array of plants and animals still in need of protection. Itself a creation of particular beauty, *Rare* offers eloquent proof that a picture really is worth a thousand words as it shows us, one after another, scores of uniquely remarkable and seriously threatened life-forms. It is a compelling story and a many-faceted, brilliant jewel of a book.

## Book Information

Hardcover: 160 pages

Publisher: Focal Point (March 16, 2010)

Language: English

ISBN-10: 1426205759

ISBN-13: 978-1426205750

Product Dimensions: 7.3 x 0.8 x 10.3 inches

Shipping Weight: 1.8 pounds (View shipping rates and policies)

Average Customer Review: 4.7 out of 5 stars — See all reviews (36 customer reviews)

Best Sellers Rank: #447,345 in Books (See Top 100 in Books) #106 in Books > Science & Math > Nature & Ecology > Endangered Species #472 in Books > Science & Math > Biological Sciences > Animals > Wildlife #481 in Books > Arts & Photography > Photography & Video > Nature & Wildlife > Plants & Animals

## Customer Reviews

This is a book of beautiful photographs with an important message. Almost 2,000 species are endangered with some on the verge of going extinct. Many species have already disappeared forever. Joel Sartore photographed and wrote about several such species. He demonstrates how some endangered species such as the American alligator are thriving, with help. Other species, are gone forever, like the Columbia Basin Pygmy Rabbit, which became extinct in 2008. The

Endangered Species Act was passed by Congress and signed into law by President Nixon in 1973. Habitats have been saved to assist challenged species. This has forced us to often question: which is the more important, the needs of humans or the needs of nature? Other laws have been passed to help both humans and nature, such as the Clean Water Act and creating the Fish and Wildlife Services as well as the National Marine Fisheries Service. Many helpful actions have been local ones, such as petitions that saved habitats from being destroyed. Not all endangered species are large animals. Even bugs and all kinds of living things play important roles in ecosystems. There are about 1,011 species within the U.S. and its waters that are endangered with 301 listed as threatened. Habitats have been saved for 538 species. Recovery plans have been developed for 1,134 species. 49 species have recovered enough that they have been removed from these lists, yet nine were done so because they went extinct. 14 species were removed because their population numbers increased enough for re-designation. 16 were removed due to administrative reasons, such as discovered more in new counts.
