The Body Electric: Electromagnetism And The Foundation Of Life

Synopsis

The Body Electric tells the fascinating story of our bioelectric selves. Robert O. Becker, a pioneer in the field of regeneration and its relationship to electrical currents in living things, challenges the established mechanistic understanding of the body. He found clues to the healing process in the long-discarded theory that electricity is vital to life. But as exciting as Becker's discoveries are, pointing to the day when human limbs, spinal cords, and organs may be regenerated after they have been damaged, equally fascinating is the story of Becker's struggle to do such original work. The Body Electric explores new pathways in our understanding of evolution, acupuncture, psychic phenomena, and healing.

Book Information

Paperback: 368 pages

Publisher: William Morrow Paperbacks; 1 edition (July 22, 1998)

Language: English

ISBN-10: 0688069711

ISBN-13: 978-0688069711

Product Dimensions: 6.5 x 0.9 x 9.2 inches

Shipping Weight: 1.4 pounds (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars [See all reviews](#) (166 customer reviews)

Best Sellers Rank: #13,291 in Books (See Top 100 in Books) #1 in [Books > Science & Math >](#)

[Biological Sciences > Biophysics](#) #1 in [Books > Science & Math > Biological Sciences >](#)

Customer Reviews

Here is a dedicated surgeon who spent three decades doing the step-by-step research necessary to determine what causes limb regeneration. During those years he and his colleagues had to run interference against the most hideously uninformed, petty, self-serving agencies and bureaucracies, which are often made up of other scientists. Dr. Becker was studying something very important, and his conclusions flew in the face of the conventional views of science at that time, and also of today. He was way ahead of his time. One of the most important parts of the book was the information on how we are bombarded every day by electromagnetic radiation which has proven to be harmful, but which is DENIED harmful because of economic interests. Studies showing it is harmful are delayed or buried. As a result of this radiation across America, people suffer from all sorts of ailments that doctors are unable to diagnose. This man is one of the true pioneers of energy medicine. At the time

he was doing his research, he had no idea that the electrical signals he was detecting in the bodies of both animals and humans, were part of the body's energy system, one of which is the Meridian system (along which acupoints are located). Against professional backbiting and the loss of all funds for further research, he persevered with his honor intact. This work was important because he was questioning why, if newts and salamanders can re-grow a limb, why can't we? If we continue to have a few scientists who buck the beurocracy, and go public with their findings, and are able to withstand the ferocious attacks of peers and intrenched institutions, then we will have scientific progress. If not, we will continue to have most of our research projects done by mediocre follow-the-leader researchers on increasingly obscure projects which are far removed from the wholistic view of the human body that needs to be taken. I say "Bravo" to this man.

If you have not read Robert O. Becker yet you must, if you have any interest in health processes or the healing process. He was a very thorough medical researcher with a keen interest in regeneration and lays the basis of his work on a rich history of medical evolution from 2,000 BC forward. While he touches only lightly on silver, he was the first to certify that electro generated silver ions not only kill most pathogens but are also the only metallic ions to cause dedifferentiation of cells and thus rapid local regeneration. His primary application was as bimetallic (battery) implants to speed bone and other tissue healing but he opened the world to the electrical nature of cellular life processes. Another interest I have always had was TENS or zapper units but after reading his works find 99% of applications are very risky due to mans constant desire to "make it stronger" - he found as little as a few billionths of an ampere and less then 1 volt triggered healing or regeneration and more was not only counterproductive but usually dangerous. He gets bitter in the end, having been forced to close his lab, essentially banned from research by his peers because he moved forward too far too fast plus eventually got involved in attacking the electropollution man has introduced into our environment in the last 60 years. Our universe and thus evolutionary development are based on a low level electromagnetic environment with the dominant 10 hertz frequency of both our brains and gravity waves but man has increased the electropollution by 1,000 times, with the advent of 50/60 Hz electric lines blanketing the earth and pervase pulsed microwaves to the point we are effecting the Van Allen belt and thus weather, if not the general decline of many of mans bio-functions! His followup book Cross Currents is slightly repetative but adds a great deal more, especially to his electropollution concerns.

This is not an extremely technical book. You would have some trouble trying to reproduce the good

doctor's experiments with nothing but this. But it is very influential, and very interesting. A collection of the Biological works of Robert Becker would not only get 5 stars from me, but would be the greatest scientific work of the 20th century, with the POSSIBLE exception of Einstein's "Collected Works on Relativity". Yes, Becker is that good. My first exposure to Becker was a relatively unimpressive interview on 60 minutes when I was a boy. In college I watched this man's work almost singlehandedly bring back electrobiology, which (so said the books printed in the 80's) was dead. There is still much to do in this field. It's rare for an MD (no, he is not a PhD) to be able to figure these things out without having someone else tell it to him. That's a compliment, by the way. Hell, MD's keep saying the Atkins diet won't work, when bodybuilders and wrestlers have been using the same principles very successfully for decades. They just aren't progressive thinkers for the most part, but this guy has more to say (that you need to hear) than any PhD around today. His early article in the Journal of Bone and Joint Surgery (an early inspiration for my thesis) is cited here, as are several of his later articles, so it gives you leads to follow. If you are a scientist or are studying to be one, I recommend this as something very important to read between semesters. If you are a laymen that is either interested in science or just worried about the potential hazards of electromagnetic pollution, I recommend it as a starting point.
